

Structural design for houses

Domestic residential projects are more complex than many much larger commercial projects and need the firm's most senior engineers. This is the belief that guides the allocation of staffing resources at GW Engineers for the prestige homes which it designs and documents.

A recent example of GWE's contribution to design is this magnificent four-level Sydney home and storage area to early discussions between the builder and architect.

"We did some preliminary sketches and worked with the architect then discussed the plan on site with the builder," says Michael Chuah.

"The success of this project from an engineering point of view is that we were able to picture how it will be built as we progressed with the design to maximise buildability with a view to containing time and cost".

Dear Allan,

We would like to take this opportunity to express our thanks for the quality of the long standing relationship we have experienced with Gardiner Willis and Associates originally, and then progressing to the renamed GW Engineers. We first commissioned Gardiner Willis for small scale residential projects some 25 years ago and have today a long history of projects working with you varying from small domestic structures to complex designs for dwellings to \$2.5million in dollar value.

As a small firm of building designers specialising in residential work, in which unexpected circumstances are often uncovered in the process of the work, we have relied on the strength and support you have given us. Many of our projects have been alterations and additions which have demanded innovative and cost effective solutions to problems inherited from the earlier structures or imposed by restrictive planning controls. Your practical solutions to these issues have assisted us in completing these projects on time and to budget.

Having a relationship we can call on at any time for advice and direction has also been very valuable in the effective management of construction projects involving partial demolition of aging structures and the preservation of essential features in heritage properties. In these circumstances, knowing we can call for an on site assessment of the structure as it is uncovered allows the work to continue smoothly. Many more structures in poor condition must now be preserved, and your assistance in approaching these requirements has been helpful right from the beginning of the design process.

We have confidently recommended your firm to our clients for many years and have reliably been provided with professional and thorough work, supplied in a timely manner. We trust that our relationship will continue well into the future.

Yours sincerely

Marjorie Gamble B Arch
